

## WHAT YOU WILL NEED . . .

1. **FELT** - a 9"x12" piece for each robot (Joann's Fabrics carries Kunin brand felt that is made from recycled plastic bottles). This felt is a bit stiffer and is easier to work with.
2. **SCISSORS**
3. **2 DOWELS** - 1/8" thick
4. **HOT GLUE**
5. **STRING**
6. **MINI BRADS** - you can find them in the scrap booking section of most craft stores
7. **WASHER**

- 1 print and cut out robot shapes
- 2 hold paper shape up to felt and cut following the outlines, don't worry if it's a little off, bots are even more cute with quirks.

do this twice for each shape

- 3 glue same shapes together
- 4 use two small dowels and some thread to assemble the mobile, you will need to move the center connections to get the mobile to balance (this is the tricky part)
- 5 tie a washer at the top of the string to make it easier to hang and ta-da you're done!
